UARM **Swift Pro**

firmware guidance

SHENZHEN UFACTORY CO. LTD.

v1.0.9

Contents

1. The difference between firmware V3.0 & V4.0	02
2. Switch and use firmware V3.0 & V4.0	02
3. Additional Notes	03

The Difference between V3.0 & V4.0:

V3.0 is designed for the applications (for example: 3D printing) so it supports all functions in uArm Studio.V4.0 is designed for the efficient automation, so it offers 2X faster speed and step losing detection.

For more details, please refer to the chart below:

	Firmware 3.2 Link	Firmware 4.3 Link
Description	Old Version Firmware	Add port automatic identification, fix some bugs
Blockly	✓	✓
Control	✓	✓
Teach & Play	✓	✓
Leap Motion	—	✓
Draw/Laser	✓	✓
3D Printing	✓	—
APP Control	✓	—
Support Grove Modules	✓	—

Firmware 3.2 Link

Firmware 4.3 Link

<https://bit.ly/2Lts7Zk>

Note: the above conditions based on uArm Studio Version 1.1.20.

Switch and Use Firmware V3.0 & V4.0

Download the firmware V3.0&V4.0

Connect the uArm with USB cable. Then simply press the “flash firmware V4.2.1” button, then it will flash automatically, and vice versa.

V3.0 link <https://bit.ly/2vNjvly>

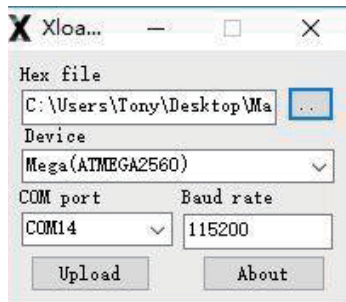

Additional Notes

If firmware update failed halfway, or flashed the wrong firmware, please don't worry, following the steps below:

- 1 Download the correct firmware (how to download the file from Github) <https://bit.ly/2PUm2UI>
 V4.0: uArmPro_V4.4.0_release_20190327.hex <https://bit.ly/2DX6F8X>
 V3.0: uArmSwiftPro_Standard.hex <https://bit.ly/2vHtSaP>
- 2 Download the XLoader <https://bit.ly/2H9MyGO>
- 3 Connect the uArm to your computer;
- 4 Open XLoader, select the firmware (hex file);
- 5 Click "Device", select "Mega(ATMEGA2560)";
- 6 Click "COM port", select port (the port is different for each computer, please open the "Device Manager" and check the "Ports(COM&LPT)" beforehand);

7 Set “Baud rate” as 115200; Click “Upload” to finish the flashing process.

If you use xLoader to flash the firmware, please make sure you check the following steps:

- (1) Firstly, disable the software (e.g. Arduino IDE and/or uArm Studio);
- (2) If you did use the uArm Studio, please open the “Task Manager” (Ctrl+Shift+Esc), and terminate the “uarmcore”
